General Discussion:

The general observations and recommendations were provided by the external members. The salient points of the discussions are given below.

- A center of excellence should be initiated in the field of Defense and Space Technology.
- With the growing global demand for advancements in Artificial Intelligence and semiconductor technology, it is imperative to upgrade academic curricula to meet these evolving needs. This can be achieved by introducing new elective courses, hands-on projects, and internships in cutting-edge technologies. Simultaneously, enhancing faculty expertise in these domains should be a key focus to ensure quality education and research.
- To align with future industry demands, student exchange programs, particularly in semiconductor technology, should be actively promoted at both national and international levels. Experiential learning must become a cornerstone of the curriculum—not just through projects and internships but also through immersive exchange programs that provide global exposure.
- The patents published/granted should have an alignment with the startups and industry needs.

- It is suggested that for more than 150 years the Indian Penal Code (IPC) was in force while introducing New Criminal Laws such as Bharatiya Naya Sanhita (BNS), the name of IPC must be retained and should be taught to the students along with the BNS.
- For law students, an elective course offering a comparative study of the evolution of the Indian Penal Code (IPC) and the Bharatiya Nyaya Sanhita (BNS) can provide valuable insights and broaden their academic perspective.
- Additionally, a structured school-wise performance evaluation system with clearly defined metrics is essential for driving the institute's overall growth and fostering excellence across all disciplines.
- The meeting ended at 06:00 pm after vote of thanks by the Registrar.
